

Siby I. Garcés Polo. Chemical Engineer (University of San Buenaventura, Colombia), Magister Scientiarum in Chemical Engineering (University of Zulia, Venezuela), and Ph.D. in the Synthetic and Applied Chemistry program (Public University of Navarra, Spain). Teacher of basic engineering subjects. Her field of research is in applied environmental technologies aimed at the capture of CO₂ and other gases or vapors, by adsorption processes in microporous materials for environmental and energy applications. Other areas of study include pyrolysis processes of biomass and waste materials, synthesis and characterization of micropore materials, wastewater treatment and dry methane reforming processes. The results of the work have resulted in publications in high-impact journals, participation in scientific events, patent applications, and training of students at the post-graduate level.
